

Data Visualization and Story Telling course

Assignment [20% of the Course Weight]

Key deliverable of the assignment:

Demonstrate the application of Effective Principles of Visualization Design for designing a dashboard that depicts Vehicle Registration across states and various insights for analysing trends and patterns. [Key aspects, by Gestalt Principles, Visualization Best Practices, colour schema should be clearly demonstrated]

Data source:

- Synthesized Vahan Data of different States:
- 2017 to 2024 Registration
- Specific Table: VAHAN_Data

Assignment Tasks

1. Data processing [5 Marks]

Identify and Create Key Metric using the provided dataset.

2. Visualization Development [10 Marks]

Create appropriate visualizations based on aggregated data [e.g. by considering the full or aggregate data for the select 12 States]

- Registrations by Vehicle Category
- Registrations by Emission Norm
- Registrations by Fuel Type
- Registrations by Year

3. Dashboard Design [5 Marks]

- Design a dashboard and it should have the four visuals covered in question 2
- Incorporate drill down or selection feature for showcasing the Registration and Vehicle details
- Overall look and feel of the reports and dashboard

Platform for presenting the dashboard: Develop Reports and Dashboard in Power BI / Tableau tool (if you can demonstrate the same) – you must share upload the final file along with the curated data set used for developing the visualization. Ensure enabling access for public view if using Power BI / tableau public applications. All submissions should have the underlying data excel file.
